

Install nodeJS: nodejs.org/en/download: LTS

- Should see download of node-v12.-.x64...msi
- "Next"
- "Accept License and Agreement"
- Choose folder
- "Next"
- "Next"
- "Install"
 - While Setup Wizard installs Node.js, call your grandmother and let her know you're excited for the semester to conclude.
- "Finish"
- Close other windows/programs, Press Any Key to Continue (x2)
- "Yes" to Windows Powershell
 - You can close out of Windows Powershell when it opens
- To check installation, type 'node' in command window. Successful completion will say 'Welcome to Node.js v12.16.2.'

Install Electron and other requirements: electronjs.org/docs/tutorial/installation

- To install globally, type `npm install electron -g` in cmd window
- `ppm install dateformat`

If MySQL is not installed, `npm install mysql`

In the 'js' folder, under 'controllers', open the connection.js file and change lines 10-15 [the connection information] to your machine's credentials
